

**AMENDMENTS TO THE ABSTRACT**

Please substitute the following paragraph(s) for the abstract now appearing in the currently filed specification:

-- The present invention relates, for example, to a cutter, an apparatus for producing an interlabial pad having the cutter, a cutting method, and a method for producing the interlabial pad including the cutting method. The cutter cuts out a member from continuous sheet base material. ~~The cutter, has; a conveyer for conveying the base material along the continuing direction; a cutter having a cutting blade and a driving mechanism for bringing the cutting blade in/from substantially the center in the width direction of the conveyed base material, for cutting out the member by pressing the cutting blade against the base material; a member discharger for discharging the cut out member; a divider for dividing the base material remainder, which is a remainder of the base material after the member is cut out, into two along the continuing direction of the base material; and a base material remainder discharger for discharging the divided base material remainders in the directions away from each other.~~ In accordance with According to the present invention, separation of the members and the remaining base material remainder can be surely separated is ensured so that ~~the dislocations~~ dislocation of the cut-out member ~~can be~~ is prevented from occurring. --
